

 **ENERGY RATINGS**

VELUX skylights have been energy rated in accordance with the Skylight Energy Rating Scheme (WERS). WERS is a scientifically developed rating system that measures the skylight's thermal performance in three categories:

Summer

The skylight is rated by its ability to limit the solar heat gain in summer (keeping the heat outside). VELUX skylights have achieved the maximum 5-star Summer rating.

Winter

The skylight is rated by its ability to keep the heat inside during winter. VELUX skylights have achieved a 4.5 or 5-star Winter rating.

Cool Daylight

'Cool Daylight' refers to the skylight's ability to let light in while keeping heat out. VELUX skylights without a flyscreen have achieved the maximum 5-star 'Cool Daylight' rating. Models with a flyscreen achieve 4.5 stars. (the light has to pass the flyscreen)
