

 **LOAD TEST**

VELUX skylights are tested by placing a concentrated load of more than 100 kilos on the two weakest points of the skylight – the middle and the corner. The load is left in place for 1 minute in each position.

All VELUX skylights, roof windows and sun tunnels have passed the test and comply with AS4285.

Glazing

With toughened outer pane and laminated inner pane, VELUX High Performance glazing complies with AS1288 overhead glazing requirements.
